

VALENTINO CIABATTARI

Master's Student in Aerospace Engineering

@ciabattariv@gmail.com

+39 344 4847288

Turin, Italy

27 February 2003

Argentine and Italian Citizenship

valentino-ciabattari

EDUCATION

M.Sc. in Aerospace Engineering

Politecnico di Torino

2025 – Present

Turin, Italy

- Double-degree program with a focus on aerodynamics, fluid mechanics, numerical modelling, and structural analysis.
- Academic training oriented toward aerospace applications and computational fluid dynamics.

Aeronautical Engineering

Universidad Nacional de Córdoba

2021 – Present

Córdoba, Argentina

- Current GPA: 8.24/10 (Passing grade: 4/10).
- Ranked first on academic merit for the UNC – PoliTO double-degree program.

LANGUAGES

- Spanish: Native.
- Italian: B2 level (PLIDA certification).
- English: B2 level (IELTS 6.5).
- French: Basic level.

FURTHER EDUCATION

- Diseño y Modelado Mecánico 3D con SolidWorks: Universidad Tecnológica Nacional (UTN).
- Student Exchange Course: University of Cambridge.

SKILLS

Technical Areas: Applied Aerodynamics

Numerical Modelling

Data Analysis

3D CAD Design

Structural Analysis

Software and Tools:

Python

MATLAB

SolidWorks

Ansys

MoTeC

LaTeX

OptimumK

Patran-Nastran

Soft Skills: Strong Sense of Responsibility

Teamwork

Initiative

PROFILE

Advanced Aerospace Engineering student with technical experience in Argentine motorsport and active involvement in Formula Student with Squadra Corse PoliTO. Motivated to apply engineering to the development of high-performance vehicles, with interest in aerodynamics, fluid mechanics, and structural analysis.

EXPERIENCE

Formula Student

Squadra Corse PoliTO

2026 – Present

Turin, Italy

- Technical collaboration within Squadra Corse PoliTO, supporting the management and organization of the team's technical information.
- Contribution to more structured, traceable, and performance-oriented workflows.

Technical Development in Motorsport

FDC Diseño y Desarrollo

2020 – Present

Falda del Carmen, Argentina

- Aerodynamic optimisation of a racing car rear wing through CFD simulations in Ansys Fluent, together with the design of a dedicated rear-view mirror.
- Development of technical management software in Python with an integrated database for the storage, consultation, and analysis of set-up data, tyres, aerodynamics, track sessions, parametric circuit characterisation, and time-sector analysis.
- Track engineering activities with MoTeC AiM, telemetry analysis, and support for vehicle set-up optimisation.
- Participation in the preliminary design of a competition UTV, focused on roll cage, front suspension, and kinematic analysis using SolidWorks and OptimumKinematics.

Junior Track Engineering

Detroit Racing – Turismo Nacional

2025

Alta Gracia, Argentina

- Junior track engineering support, contributing to data acquisition and interpretation for vehicle performance analysis.
- Design, development, and implementation of a new front nose assembly for the competition vehicle.

Further information on projects, technical documentation, certifications, and recommendation letters is available in my online portfolio: <https://valenciabattari.github.io/>.
