VALENTINO CIABATTARI

Master's Student in Aerospace Engineering

ciabattariv@gmail.com | +39 344 4847288 | Turin, Italy | valentino-ciabattari
27 February 2003 | Argentine and Italian Citizenship

EDUCATION

M.Sc. in Aerospace Engineering

Politecnico di Torino

2025 – Present | Turin, Italy

- Double-degree program with a focus on aerodynamics, fluid mechanics, numerical modelling, and structural analysis.
- Academic training oriented toward aerospace applications and computational fluid dynamics.

Aeronautical Engineering

Universidad Nacional de Córdoba

2021 – Present | Córdoba, Argentina

- Current GPA: 8.24/10.
- Ranked first on academic merit for the UNC – Politecnico di Torino double-degree program.
- Main academic interests: aerodynamics, fluid mechanics, and structural engineering.

LANGUAGES

- **Spanish:** Native.
- **Italian:** B2 level (PLIDA certification).
- **English:** B2 level (IELTS 6.5).
- **French:** Basic level.

FURTHER EDUCATION

- **Diseño y Modelado Mecánico 3D con SolidWorks:** Universidad Tecnológica Nacional (UTN).
- **Student Exchange Course:** University of Cambridge.
- **Introducción a MATLAB/Simulink con Enfoque a Problemas de Control:** Facultad de Ciencias Exactas, Físicas y Naturales, UNC.

SKILLS

Technical Areas: Applied Aerodynamics | Numerical Modelling | Data Analysis | 3D CAD Design | Structural Analysis

Software and Tools: Python | MATLAB | SolidWorks | Ansys | MoTeC | LaTeX | OptimumK | Patran-Nastran | MS Office

Soft Skills: Strong Sense of Responsibility | Teamwork | Initiative | Continuous Learning | Adaptability

PROFILE

Advanced Aerospace Engineering student with hands-on technical experience in Argentine motorsport, driven by a strong interest in the application of engineering to high-performance vehicles. Main areas of interest include aerodynamics, fluid mechanics, and structural analysis.

EXPERIENCE

Technical Development in Motorsport

FDC Diseño y Desarrollo

2020 – Present | Falda del Carmen, Argentina

- Aerodynamic optimisation of a rear wing through CFD simulations in Ansys Fluent, together with the design of a rear-view mirror for competition vehicles.
- Development of technical management software in Python with an integrated database for the storage, consultation, and analysis of set-up data, tyres, aerodynamics, track sessions, parametric circuit characterisation, and time-sector analysis.
- Track engineering activities using **MoTeC AiM** for telemetry acquisition and analysis, data interpretation, and support in vehicle set-up optimisation.
- Participation in the preliminary design of a competition UTV, focused on roll cage development, front suspension design, and kinematic analysis using SolidWorks and OptimumKinematics, under FIA-oriented design criteria.

Junior Track Engineering and Technical Consulting

Detroit Racing – Turismo Nacional

2025 | Alta Gracia, Argentina

- Junior track engineering support, contributing to data acquisition and interpretation for vehicle performance analysis.
- Designed, developed, and delivered a new front-end assembly for the competition vehicle, from initial concept and design definition to manufacturing and track implementation.

Further information on projects, technical documentation, certifications, and recommendation letters is available in my online portfolio: https://valenciabattari.github.io/.
